# RIPE NCC Tools Update

Robert Kisteleki  
RIPE NCC

Robert Kisteleki | RIPE 86 MAT WG | 25 May 2023

**RIPEstat**

# RIPEstat

- Service Quality and Monitoring
  - Focus area since RIPE 85
  - Adopted a more powerful system for log monitoring and analytics based on OpenSearch
  - A custom test framework (“TESTstat”) helped us to discover and monitor our progress with failing queries in the Data API
  - Majority of failed queries are due to failures in the backends
  - Deployed 50+ bug fixes and service improvements in the Data API

# RIPEstat

- RPKI-History Feature
  - Address space covered by RPKI now exposed for every AS query
  - Data-pipeline improved to be less resource-intensive
- M-Lab Data
  - Review and test of reintegrating M-Lab data successful
  - ETA Q2 2023

# RIPEstat

- RIPEstat UI2020 (web application)
  - Bug fixes, interface tweaks and accessibility improvements
  - Change log:  
[https://stat.ripe.net/docs/03.RIPEstat-UI-\(Current\)/03-releases.html](https://stat.ripe.net/docs/03.RIPEstat-UI-(Current)/03-releases.html)
- RIPEstat UI2013 (widget-based)
  - Preparations for open sourcing: library updates and code clean-up
  - Some feature requests will also be implemented before the OS release

**RIPE Atlas**

# RIPE Atlas

- Ongoing: User Interface (website/app) renewal
  - Modernising the UI, reviewing layout and functionality, improving UX
  - Documentation is renewed, ambassador support, promotional pages are up next
- Ongoing: Probe firmware packaging
  - Reworking the probe package to better match popular Linux distributions
  - Main goal is to simplify development, installation and upgrades (maintenance)
  - Looking forward to working with package maintainers
- Ongoing: Modernising the result storage/retrieval backend
  - Looking at the data retention policies, costs, cloud technologies, ... aligned with actual, real-life use of data

# RIPE Atlas

- Published an “API usage antipatterns” article
  - Contains useful hints for heavy use of the APIs
- Looking at addressing possible misuse: “probe farms”
  - Where some users seem to run multiple probes just to gain credits
  - With virtually zero benefit for the community or the network

**RIPE IPmap**

# RIPE IPmap: Update

- Improved single-radius scheduling queue issues ("this measurement has been queued")
- Smarter probe selection
- Dumps at <https://ftp.ripe.net/ripe/ipmap/> now give recent "latency" engine data

# RIPE IPmap: Focus

- Crowdsourcing interface
- Geofeed integration - analyse (potential) use for "infrastructure" addresses (as opposed to eyeballs)
- Smarter active scheduling
- Better, more targeted latency measurements (including for reverse-dns model input)

**RIPE RIS**

# RIS: More Timely and Smaller MRT

- We changed the process that generates MRT RIB dumps
  - Files much smaller (25% of earlier size) and delivered with less delay (2hr -> 10m)
